Computer Science undergraduate (NUS, Quantitative Finance minor) with four fintech internships across product analytics, data science and ML engineering at Wise, OCBC Bank, Gotrade and Bank Jago.

Education

National University of Singapore Aug 2023 – June 2027 (expected)

- Bachelor of Computing in Computer Science, Minor in Quantitative Finance
- **Side project:** Telegram bot, built with Claude, that adds plain-text messages to iCloud Calendar (Python, CalDAV, Docker)

Experience

Wise – Product Analyst Intern (APAC Growth) Feb 2026 – Sept 2026

- Broke a Philippines A/B test into a step-by-step funnel and found users were dropping off because the variant had removed the currency calculator, a first step that historically converts better. My fix went onto the product roadmap (projected 7% conversion lift).
- Chose 6 APAC routes for a CRM promotion by comparing each route's volumes against the market over the same window, then pitched the analysis to marketing, who signed off at a projected 5% lift in customer LTV.
- Owned analytics for the AliPay+ integration, writing the SQL behind the Superset dashboards (close to £1M in monthly volume and growing) that product, ops and engineering used to track it.
- Spotted early error spikes in AliPay+ payments from raw SQL tables and flagged them to engineering; their fix cut failed transactions by over 20%.
- Shipped new QR payment fields into our DBT models through code review and owned the APAC QR payments report.

OCBC Bank – Global Transaction Banking, Digital Solutions Intern May 2025 – Aug 2025

- Guided a new tokenised-deposits product towards its first launch, running UAT across 163 test cases and triaging defects with Engineering, Risk and Ops.
- Researched the CBDC market and built the pitch decks leadership took into client meetings and RFPs.

Gotrade Indonesia – ML/AI Engineer May 2024 – Aug 2024

- Built an LLM feature that summarised stocks with the OpenAI API and a Neo4j knowledge graph, predicting over 60% of long- and short-term price moves correctly.
- Prototyped an AI deployment on Azure ML and Devin to test build vs buy; my recommendation went onto the company roadmap.

PT Bank Jago tbk / Dkatalis Singapore – Data Science Intern Jan 2023 – June 2023

- Built engagement models (Logistic Regression, Random Forest, XGBoost) that showed the product team which features to prioritise.
- Wrote SQL and Python pipelines for KYC compliance and risk data, and deployed models to production with Docker and Kubernetes.

Leadership

NUS Fintech Society – Business Development Lead 2025 – 2026

- Pitched fintech firms for sponsorship and guided a team of 5 through their own pitches, securing 3 sponsors worth S$10K and managing each partnership through to joint events.

Skills

- **Programming:** SQL, Python (Pandas, NumPy, PySpark), Java, JavaScript, Excel (VBA)
- **Data & BI:** Snowflake, DBT, Spark, Hive, Power BI, Superset, Looker, Mixpanel, Tableau
- **AI & ML:** AI-assisted development (Claude), OpenAI API, Neo4j, XGBoost, Azure ML, Docker, Kubernetes
- **Product:** A/B Testing, Funnel Analysis, User Journey Mapping, Requirements, UAT, Figma, Agile/Scrum
